Software Engineer with 5+ years of experience emphasising on front-end development using fundamentals such as HTML5, CSS and Javascript. While having a deep understanding of ReactJS, TypeScript with ContextAPI/Redux as state management. Github/Bitbucket for Version Control. Accustomed to working in an agile environment accompanied by systems such as JIRA, WRIKE, SLACK, WATSON. Extremely experienced with working in a team/group and can communicate extremely well.

PROFESSIONAL EXPERIENCE

Front-End Developer

FullCycle Development Group/DECIBEL KC, Overland Park, KS

June 2017–Present

- Prepared and worked in required Languages, being able to read documentation and translate it to necessary needs to meet clientele expectations or wants. If it was a new language, being able to pick it up quickly and meet any time restraints.
- Developed and QA my own work. Working for a small team we often had to QA our own development, such has helped me gain experience and a good eye for developing quality code and foresee any possible future bugs.
- Ensure maximum client satisfaction by providing exceptional and personalized service, enhancing client satisfaction. Stayed in close contact with clients and communicated any roadblocks or successes to continue to earn clients trust and loyalty.
- Work closely with multiple developers to make sure we stayed on track. Made sure our tickets were clean and precise and our tasks were completed on time. Participated in multiple stand-ups and client meetings and prepared sprints to make sure we completed when promised.
- Experience in an agile environment that creates and supports a culture that encourages a team of people o work towards a common goal

PROJECTS

MoodSpark - Moodspark is a Web/Mobile app created with a Sandbox investment. The main goal of MoodSpark is to observe Mentally Ill Patients for Therapists during an overnight watch. The App is meant to observe the patient and if there is an episode such as a Nightmare, Crying, Screaming. The App would automatically take note and record the scene and store it for the therapist to revisit in the day.

RESPONSIBILITIES:

- Closely worked with the designer helping with the planning and wireframing of the project.
- Built the app front-end using React, ContextAPI.
- Learned how to use AWS Chime and read through documentation to get an understanding of how to implement it.
- Used TailwindCSS to make sure we reached the designers vision.
- Made sure all tasks were laid out properly and reported at each stand-up.
- Completed all necessary tasks on a timely-manner
- Ensured all Camera needs were met, One observer, one attendee and one that displayed the entire enclosed area.
- Used bitbucket to help with version control
- Communicated needs and roadblocks with back-end developers to ensure completions.
- Experience with RestfulAPI and Babel

Make 48 - Make48 was a popular TV show that gave contestants 48days to complete a difficult task. The winning group would then take the prize money and possibly get hired by the invested group. Make48 reached out to us to create an App that would allow anyone to sign up online to not only compete in the challenge but investors to register and put up their own challenge to be done. Some of the backers were John Deere, Ford, Cannington Farms and PnG.

RESPONSIBILITIES -

- Built the App using React front end with laravel back end.
- Tailwind CSS and Material UI to help with design and situational components.
- Read all necessary documentation
- Used state management to make the site fully dynamic in all areas, Sign up dates, Expiration Dates and Challenge prizes
- Authentications with Auth0
- Open communication with both back end developers and project management
- Open communication with clients as the sponsorship kept growing to make sure we added them to the application.
- Experience with Webpack and SCSS

Quinn Plastic Surgery - QPS is a plastic surgery company here in Kansas City that wanted an entire remodel of their site.

RESPONSIBILITIES -

- Hands-on experience working in PHP/Wordpress.
- Worked closely with the designer to make sure it met client satisfaction.
- Built the entire Web/Mobile app from top to bottom.
- Deployed with WPMU DEV
- Often had to FTP using Firezilla
- Communication between client and project manager to make sure all tasks met in a timely manner
